ERRATA	338-345

OFFICIAL STREET GRADES

IN THE

CITY AND COUNTY OF SAN FRANCISCO.

---

*Prior to the year 1853, the grades of streets were fixed and determined from time to time on the ordering of street improvements, when necessary to afford business facilities. In the early part of that year, proceedings were inaugurated in the Common Council for the establishment of grades, which resulted in the employment of Messrs. Milo Hoadley and William F. Humphreys, in May, 1853, to do and perform all the work and labor necessary to the establishment of suitable, proper and permanent grades for the streets of the City of San Francisco. These gentlemen presented reports in June and July, 1853, recommending the grades to be established on all the streets, which grades were established by the Common Council by Ordinances Nos. 350 and 425. In 1854 the Common Council adopted a Resolution which recited that sufficient manifestations of disapprobation on the part of the people had appeared in relation to the City grades established by said Ordinances, and provided for the appointment of a Special Committee by each Board (Aldermen and Assistant Aldermen) to employ three competent civil engineers to investigate and report their views and opinions on the system of grades adopted. The Committee appointed consisted of Messrs. J. R. West, John Nightingale, Frank Turk, Henry Meiggs and Samuel Gardiner, who, under the Resolution referred to, appointed as the Engineers Brevet Major J. C. Barnard, United States Engineer Corps, A. T. Arrowsmith and Lieutenant J. A. Hardie, United States Third Artillery, who, in May, 1854, presented the report, with a table of grades, which grades were adopted as the permanent grades by Ordinance No. 608 (the prior Ordinances, Nos. 350 and 425, being repealed), which was approved by the Hon. C. K. Garrison, Mayor, on July 10, 1854.

In 1862 the Legislature passed an Act entitled "An Act to establish the lines and grades of streets in the City and County of San Francisco," appointing for that purpose a Board of Civil Engineers, composed of the City Surveyor (George C. Potter), Milo Hoadley and Thaddeus R. Brooks.

The work was prosecuted, reports made from time to time, and the grades established within certain limits by the Board of Supervisors. By an Act of the Legislature, approved April 4, 1864, the time was extended, and the engineers completed their labors. The final report, etc., signed by George C. Potter, City and County Surveyor, and Thaddeus R. Brooks was filed on October 17, 1864, and, after consideration and requirement with the provisions of the Act of the Legislature

---

*Republished in part from Municipal Reports of 1888-89, page 116, Appendix.

relative to giving public notices, etc., the Board of Supervisors finally passed Order No. 684, on January 29, 1866, which was approved by the Hon. H. P. Coon, Mayor, on January 30, 1866, establishing the lines and grades of streets and public highways in the City and County of San Francisco, west and south of Ninth and Larkin streets, from Twenty-second to Market street, which Order included all the grades, etc., previously reported on by said Board of Engineers, and recited:

Section 1. That the survey, maps, profiles and block-book aforesaid be, and they are, hereby approved and adopted, and that said maps, profiles and block-book do stand as the legal and valid official plan of the City and County of San Francisco to determine the lines of the streets, and the grades thereof, as provided by the Acts of the Legislature aforesaid.

Section 2. That the lines of the streets in those portions of the City and County of San Francisco, as delineated in the aforesaid block-book, shall be run in accordance with the distances from the monument of re-survey lines to the respective corners, as fixed and indicated in said block-book; and every survey hereafter made shall conform thereto, and shall be plotted in said block-book as an official record of such survey.

Section 3. That the lines of streets and sizes of blocks in all the other portions of the City (not included in said block-book) shall be run in accordance with the distances and dimensions marked on the General Map of the City and County of San Francisco made by said Board of Engineers, in connection with the Monument Map of said Board of Engineers as regards the location of the monument and stakes with the lines of said streets.

In 1868 the Legislature of the State passed an Act empowering the Board of Supervisors to establish the grade of the streets and avenues within certain specified districts which were known and designated at that time as the Outside Lands, being outside of the charter limits of 1851, and east of Potrero avenue and south of Mission Creek, in pursuance of which a contract was entered into with Messrs. William P. Humphreys and George C. Potter to make surveys, erect monuments and recommend suitable grades. The work was commenced and steadily prosecuted until completion, a report being presented on July 25, 1870, and after due publication the grades of said district were established by the Board of Supervisors by Orders Nos. 955 and 972, in September and November, 1870.

As, from time to time, changes of grade were desired, the Legislature passed an Act in 1868 to afford an opportunity to property owners to have the grade of any street modified or changed from the original grade.

In the matter of the City and County property being affected, the Act of April 2, 1870 (1869-70, page 650), provides a remedy as follows: "The Mayor of the City and County of San Francisco is hereby authorized and empowered, on behalf and in the name of the City and County of San Francisco, to petition the Board of Supervisors of said City and County to order the change of the official grade of any street or streets where such change may affect any public square or other lot of land belonging to said City and County; and such petition shall have the same effect as if the same were signed by or in behalf of the owners of any property not belonging to said City and County."

In 1874 the Legislature also passed the following Act, which equalized and established the grades of all the small and subdivision streets, lanes, alleys, places and courts in blocks bounded by main streets, to wit:

AN ACT TO LEGALIZE THE GRADE OF CERTAIN STREETS IN THE CITY AND COUNTY OF SAN FRANCISCO.

[Approved March 25, 1874.]

Whereas, The grades and widths of the main streets of the City and County of San Francisco were established by the Board of Engineers under and by virtue of an Act of the Legislature of the State of California, approved April 26, 1866, and Acts supplementary thereto and amendatory thereof, as shown by maps made by them, which maps were made official by the Board of Supervisors of said City and County, as per Order No. 684, dated January 30, 1866; and,

Whereas, The grade and width of all the small or intermediate streets, lanes, alleys, places and courts shown on said map were deemed and held by said Board of Engineers as established at the same grade as the main streets at the point of intersection; and,

Whereas, Doubts exist as to whether there was any grade established in relation thereto, prior to April 1, 1872. Now, therefore,

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Section 1. The official grade and width of all the small and subdivision streets, lanes, alleys, places and courts in blocks bounded by main streets which were dedicated to public use on the 30th day of January, 1866, in the City and County of San Francisco, shall be deemed and held to have been fixed and established on said last date at the same grade as was established for said main streets on said last date, at the point of intersection of said small and subdivision streets, lanes, places, alleys and courts as have since said last date been dedicated to public use, shall take the same grade at the point of intersection with said main streets as the grade of the main street at such point of intersection, and where a different grade has not been heretofore established, or shall not hereafter be established, by the Board of Supervisors of said City and County, the grades shall be a straight or direct line drawn through the block from one main street to the other, and the surveys heretofore made from time to time by City and County Surveyors of said City and County, locating and establishing the lines and grades of said streets, lanes, alleys, places and courts, and the lots fronting thereon, are hereby made valid, ratified and confirmed, and the records of said office shall be prima facie evidence of such surveys.

Sec. 2. This Act to take effect from and after its passage.

In addition to the foregoing, various Acts have been passed at different sessions of the Legislature, establishing grades of streets, etc., or conferring power upon the Board of Supervisors to expend money for that purpose.

By an Act of the Legislature approved March 9, 1893, entitled "An Act to amend sections thirty-eight to fifty-three, inclusive, of an Act approved March 31, 1891," adding these sections to "An Act to provide for work upon streets, alleys, lanes, courts, places and sidewalks, and for the construction of sewers within municipalities," approved March 18, 1885, it was provided that "the City Council is hereby empowered to change or modify the grade of any public street, lane, alley, place or court in the manner as hereinafter provided. Before any change of grade is ordered, the City Council shall pass an Ordinance or Resolution of Intention to make such change or modification of grade. One or more streets or blocks of streets may be embraced in the same ordinance or resolution. Such publication shall be made in every regular issue of such paper for not less than ten days, and

shall describe the proposed change or modification of grade or regrading, and shall designate and establish the district to be benefited by such change or modification of grade or regrading, and to be assessed for the cost of the same. Within five days after the first publication of the Ordinance or Resolution of Intention, the Superintendent of Streets shall cause to be conspicuously posted within the district designated in the Ordinance or Resolution, notice of the passage of said Resolution. Said notices shall be the same in all requirements of contents and posting as the "notices of street work" provided for in Section 3 of the Act of which this is amendatory. If no objection to the said proposed change or changes, or modification of grade, shall be filed with the Clerk of the Council within thirty days from the first publication of the Ordinance or Resolution of Intention hereinbefore mentioned, the City Council shall have power to declare such grades to be changed and established in conformity to said Ordinance or Resolution; provided, that no change of an established grade shall be ordered except on the petition of the owners of a majority of the property affected by the proposed change of grade."

The same Act provides that any person owning property fronting upon portions of the street or streets where such change of grade is made may file a petition claiming damages, and makes the Mayor, Surveyor and Superintendent of Streets a Board of Commissioners, who shall assess the benefits, damages and costs of the proposed change of grade upon each separate lot of land situated within the assessment district, and fully defines the duties of such Commissioners.

It is of interest to note in this connection that by an Act of the Legislature approved March 11, 1893, the powers of the City Council in the matter of ordering street improvements have been restricted by the following proviso: "that whenever the grade of a street, avenue, lane, alley, court or place shall hereafter be changed, the petition of the owners of a majority of the feet fronting thereon, asking for grading the same to the new grade, shall be a condition precedent to the ordering of such grading to be done."

As some question was raised as to the elevations really intended by some of the Orders establishing grades, it being claimed that the reference to the City base had not been clearly indicated, the following Order, approved April 9, 1876, was passed:

ORDER No. 1204—RELATIVE TO STREET GRADES.

Whereas, It is claimed that a technical defect exists in several Orders heretofore passed establishing official grades of the streets in this City and County:

The People of the City and County of San Francisco do ordain as follows:

Section 1. In all Orders heretofore passed fixing street grades in the City and County of San Francisco, the figures placed opposite the names of the several streets indicate the height in feet above base or zero of level.

Order No. 1588 of the Board of Supervisors prescribes as follows:

"Every sidewalk * * * shall rise from the curb at the rate of one-fifth of an inch to every foot of width."

This fixes the elevation of the property or building line at both sides of any street with reference to the street curb. The same Order, in Section 4, contains the following:

"The curb of every sidewalk shall correspond with the official grade of the street of which such sidewalk shall form a part, except when otherwise ordered by the Board of Supervisors; and the curb of every angular corner shall be constructed with a radius so as to meet and conform to the curb of the intersecting streets."

Section 21 of this Order is as follows:

"All public streets and highways, when finished, whether paved or planked, shall have a crown from the bottom of the gutters to the middle of the roadway of at least seven inches."

The depth of the gutter below curb is prescribed, in the case of rock gutterways, by Section 13 of Order No. 2146:

"The gutterways to be formed by laying flat stones * * ; the bottom of said gutterways to be not less than eight (8) inches in depth below the top of the curbs, at a distance of twelve (12) inches out from the line thereof."

Section 14 of the same order prescribes the depth for gutters constructed with cobblestones:

"The gutterways to be formed by laying well-selected cobblestones * * ; the bottom of said gutterways to be not less than eight (8) inches in depth below the top of the curbs at a distance of twelve (12) inches out from the line thereof."

The specifications now in use for paving with basalt blocks, with bituminous rock, with Trinidad asphaltum, prescribe that "the roadway shall be brought to a true arc (from curb to curb) with a rise of one inch in every five feet from curb to center," and they further prescribe that "the gutters on each side [are] to be not less than two (2) feet wide, and to have a depression of not less than two (2) inches in the center of each gutter."

On the 9th day of May, 1887, his Honor Mayor Pond presented a communication to the Board of Supervisors calling attention to the necessity of taking some action regarding the sewer system of this City.

The communication was referred to the Committee on Streets, etc., and the question of effecting a change in the mode of providing sewers so that their construction might be in compliance with the requirements of some settled and well-defined plan remained in abeyance until the advent of his Honor Mayor Sanderson.

On January 25, 1892, the Chairman of the Committee on Streets, Mr. C. W. Taber, presented a most careful and exhaustive report, reviewing the various efforts that had been made on the part of the City to obtain a proper system of sewerage and recommending that action be taken. This report was signed by C. W. Taber, Chairman; D. B. Jackson, Wm. Wilkinson, Jas. W. Burling, Jos. Artigues.

As a result of this report, Resolution No. 6362 (Third Series) was introduced and adopted. By this Resolution the Committee on Streets was given certain instructions, and on March 7, 1892, the report of this Committee was presented to the Board.

At this meeting Resolution No. 6612 (Third Series) was adopted, providing for the appointment of a Board of Engineers to devise and provide a system of sewerage for this City and County, and Professor George Davidson, of the U. S. Coast and Geodetic Survey, Col. Geo. H. Mendell of the U. S. Corps of Engineers, and Mr. Irving M. Scott were empowered to select and appoint two engineers, who, with themselves, were to constitute a "Board of Engineers to Devise and Provide a System of Sewerage."

At the earnest request of his Honor Mayor Sanderson and the members of the Board of Supervisors, the President of the United States, Benjamin Harrison, authorized the detail of Professor Geo. Davidson and Colonel Geo. H. Mendell to assist in the preparation of a system of sewerage for San Francisco, on the ground that such work was of importance to the Government, it being the owner of a large amount of property in this City.

On the same date, by Resolution No. 6613 (Third Series), Mr. William P. Humphreys was appointed Engineer in Charge to prepare for and supervise the work of obtaining and classifying the data showing the condition of the sewers.

Work was at once commenced by Mr. Humphreys, and on June 18, 1892, he submitted his estimate of the amount required to prosecute the work during the fiscal year of 1892-3. The amount of $35,500 was included in the levy for Street Department purposes, and appropriated for the expense of the Commission. So careful and prudent were they in their work that at the end of the fiscal year they turned into the general fund an unexpended balance of $17,238.48.

Immediately on being detailed by the United States Government, Professor Davidson and Colonel Mendell, together with Mr. Irving M. Scott, entered upon the

work of the Commission. These gentlemen had evinced great interest in the subject previous to their appointment. As early as May, 1886, at the request of the Board of Supervisors, Professor Davidson, without cost or charge to the City, had furnished a most careful Report, reviewing at length the whole system and giving his views as to the method to be adopted and the plan to be pursued.

It was from no mercenary spirit that these gentlemen entered the work. They desired to give to the City the best of their engineering knowledge, and to so administer the work that it might prove a lasting monument of their ability as engineers.

The whole aim of the Commission was to furnish a plan which, without entailing on the City any large immediate outlay, might, from year to year, be carried on until the City was provided with a system that should be adequate for every need in the Department of Sewers and Grades.

There can be no doubt that had this Commission been allowed to continue its work, the City by this date would have been the possessor of one of the finest devised sewer systems of the world, and have led to the construction and reconstruction of sewers, as required from time to time, at a moderate outlay and precluded a bond issue, which, it is hardly necessary to state, is a dangerous expedient to raise money when it can be avoided, and the same results obtained by judicious annual expenditures of the funds raised by taxation. Neither Professor Davidson, Colonel Mendell nor Mr. Irving M. Scott received anything from the City for their services on the Commission.

The work of the Commission during its continuance was most careful and exhaustive, and its influence for good was felt in the Street Department and in controlling the action of the Board of Supervisors in ordering the construction of sewers.

On January 30, 1893, less than one year from the date of their appointment, the following resolution was passed by the Board:

Resolved, That the services of the Sewerage Commission, consisting of Colonel Geo. H. Mendell, Professor Davidson, Irving M. Scott, Marsden Manson and C. E. Grunsky, appointed by the last Board of Supervisors, be dispensed with after the 1st of February, 1893.

Resolved, That the work of said Commission be continued under the supervision of Marsden Manson and such assistance as may be required, under the control and direction of the Committee on Streets and the City and County Surveyor.

On February 6, 1893, by Resolution No. 8234 (Third Series), the Board of Supervisors appointed Mr. Marsden Manson and Mr. C. E. Grunsky Engineers in Charge to carry on and complete the work of collecting and compiling the data relative to the condition of the present sewers.

Under the above Resolution the work went on until the Board of Supervisors, by Resolution No. 9157 (Third Series), determined to abolish the office of Engineers in Charge to devise and provide a system of sewerage and to terminate their work on September 30, 1893.

From an examination of the various "Progress Reports," as well as from the final Report of the Commission, it will be seen that it necessarily connected itself with every department of street work, and "emphasized the necessity of making surveys to serve as a basis for establishing grades throughout those portions of the City where not already established, and of correcting grades where revision is essential."

FINAL REPORT

OF THE ENGINEERS IN CHARGE TO DEVISE AND PROVIDE A SYSTEM OF SEWERAGE AND TERMINATING THE WORK.

San Francisco, Cal., September 30, 1893.

To the Honorable the Board of Supervisors
Of the City and County of San Francisco—

Gentlemen: Complying with instructions contained in Resolution No. 9157 (Third Series), which provides that this Department be abolished from and after September 30, 1893, and that the "Board of Engineers are hereby required to turn over and file in the office of this Board all maps, books, data, etc., with a full Report, on or before said date," we have turned over to you all maps, books, papers, furniture, material and other property under our control as per inventory hereunto attached, and hold the receipt of your Clerk for the same.

In our Progress Report, submitted under date of July 15th, we have clearly set forth the defects of the present system of administrative and executive control of public works in this City, with special reference to sewers, and have cited a sufficient number of instances of evils resulting from divided official responsibility, faulty design, carelessness, ignorance, and fraud, to convince every intelligent citizen of the need of a better system of planning, directing and managing public works, as well as of the need of a comprehensive system of sewerage, which has long been recognized and is daily increasing. To this Progress Report we have but little to add.

In a reply to a communication from Wm. Broderick, Auditor, at the close of the last fiscal year, copies of which were sent to his Honor L. R. Ellert, the Mayor, and to the Chairman of the Finance Committee, we called attention to the urgent necessity for abating many of the serious nuisances created in different parts of the City by defects in the sewers for which the City is responsible, and recommending that $100,000 be made available, to be expended under our supervision, for work planned by us for the protection of the health of the people.

For the prosecution of the work with which we were specially charged, the devising of a system of sewerage, we requested that $20,000 be made available, and also emphasized the necessity of making surveys to serve as a basis for establishing grades throughout those portions of the City where not already established, and of correcting grades where a revision was essential.

It was considered impossible to comply with these recommendations, although the urgency of them was not questioned. In their stead the sum of $40,000 was set apart to be expended for modifications of the flow of sewage and the expenses of this office. We thought we had reason to expect more, in view of the importance of our work, its recognized necessity, and the fact that we had turned into the general fund an unexpended balance of $17,238.48 at the end of the last fiscal year, which had not been expended because it would not have been to the best interests of our work to use it, as explained in our Progress Report. We received no intimation as to the apportionment which we were to make of the $40,000 set apart for our use, but the necessities were such in some portions of the City, where there have been annually recurring outflows of sewage from the sewers into the streets, yards, cellars and even houses, notably in the low portions of the Eleventh Ward, that we were impelled to plan corrective works and suggest remedial measures, as outlined in our two Reports dated September 7, 1893.

The plans and specifications for these works are now on file among the papers turned over to you by us. They do not by any means cover all the work which we

had intended to recommend as necessary to correct the most glaring of that class of present evils whose existence is chargeable to a bad administrative system and the negligence, incompetence or corruption of representatives of the City. But these improvements are the most important, and would if carried out have involved an expenditure estimated by us at $27,000, being as great an amount as we thought ourselves justified in expending out of our limited appropriation.

They were not planned as a part of any proposed comprehensive system, but are intended to make efficient some of the principal existing sewers. Had a greater fund been made available for such corrective work, we should have suggested among many minor changes the improvement of Fell Street sewer on Fourteenth street, between Church and Dolores, where its grade needs correction; a change in Seventh Street sewer, where, at Townsend street, the extension towards Channel street was this year constructed twenty inches higher than the bottom of the old sewer north of Townsend street, and to this extent permits the accumulation of filth, and is an obstruction to the flow of sewage down Seventh street;* a correction of grade in Sixteenth Street sewer near Folsom street, where there is a slope the wrong way; some corrective work near Pacific and Davis streets, where the continuity of the Pacific Street sewer is interrupted by a sudden rise of two and one-half feet; besides the improvement of scores of sewer crossings in all parts of the City.

The necessity for the immediate carrying out of some corrective work was forced upon our notice in making a study of the character, condition and serviceability of the existing sewers, and we have recommended some of this necessary work, believing ourselves authorized to act in such matters at least in an advisory and supervising capacity by the Resolution under which we were appointed and which directs us "to devise and provide a system of sewerage for this City and County."

We have had frequent occasion to advise the Superintendent of Streets concerning sewers required in different parts of the City, and also in the matter of abating nuisances created at outfall points, notably in the case of the Potrero avenue sewer and the Army street sewer.

Concerning these sewers we quote from our letters of May 25, 1893:

"We have at your request examined into the possibility of providing a permanent or temporary extension of the Potrero avenue sewer to Army street, and find that two propositions will have to be considered.

"1. It is possible to extend the sewer directly across private property along the line of the proposed Potrero avenue extension to Army street.

"2. A permanent brick sewer can be put into Yolo street eastward from Potrero avenue to Nebraska street and along Nebraska street and San Bruno road to Army street.

"The second project will involve some deep trenching, as the official street grade at Yolo and Nebraska streets is eighteen feet higher than at Potrero avenue and Yolo street, but the improvement will be of permanent character.

"Along the first route a permanent sewer will not be advisable until a right of way shall have been graded, because it crosses swamp land. The great expense which will be necessary to afford secure support to a permanent sewer in advance of grading would not be justified.

"The construction of a wooden box sewer supported on piles along the first route, although apparently a desirable solution, will probably, in connection with the cost of the right of way, be very much more expensive than the permanent deflection of the sewer along the second route. We therefore recommend:

"1. That a brick sewer (3x5) be constructed in Yolo street, from Potrero avenue to Nebraska street, and along Nebraska street and along San Bruno road to Army street sewer.

---

*Concerning this matter we sent a communication to the Superintendent of Streets, on June 24, 1893.

"2. That the flow of the sewer on Twenty-fifth street be turned northerly into Potrero avenue and this proposed Yolo street sewer.

"Should this recommendation be carried out, we will be pleased to outline the special requirements which should be prescribed.

"Complying with your request of May 13th, for information as to the result of our examination of the outfall of the Army street sewer, and asking us to suggest the proper treatment of the outfall into Islais Creek (property owners having petitioned for relief), we now desire to report as follows:

"There is a large brick sewer along Army street which discharges at the east line of San Bruno road into a wooden box sewer. Just east of San Bruno road, where the sewer crosses Precita Creek (the north arm of Islais Creek), there is a break in the side of the wooden box sewer, through which at present all sewage collected by the Army street sewer escapes. The wooden sewer, after crossing Precita Creek, follows the center line of Army street to Kansas, turns south into Kansas, thence east into Marin street and terminates at a point 50 feet east of Kansas street.

"The wooden sewer is apparently in good condition near its outlet on Marin street and for a short distance along Kansas toward Army street. Near Army street, on Kansas, it has been crushed by the weight of the fill which it had to support. At this point its bottom is about twenty feet below street grade. At several points on Army street, between Vermont and Kansas, a settling of the street surface indicates that there are other points where the sewer has collapsed, but this could not be positively ascertained without uncovering the sewer, because, owing to deep deposits, the sewer was not accessible at the manholes.

"The outflow from the break in the sewer at Precita Creek, before reaching the well-defined waterway of Islais Creek, spreads over the flat surface of the swamp, and there is no question that some provision should be made at once to secure a better point of outfall.

"The wooden sewer along Army and Kansas streets to Marin street is useless; it cannot be repaired. By reason of its gradual collapse, it destroys uniformity of the street surface and causes dangerous obstruction to traffic. It should be removed. We recommend:

"1. That the wooden box sewer in Army and Kansas streets be removed.

"2. That the Army street brick sewer be extended along Army street to Kansas street and along Kansas to the north line of Marin street.

"3. That a wooden box sewer of capacity for sewage only be carried thence along Marin street to Rhode Island and Mazzini streets to an outfall into Islais Creek channel.

"4. That at the crossing of Kansas and Marin streets a storm water overflow and wooden box be provided to discharge storm waters in times of heavy rain into the swamp on the line of Precita Creek channel.

"The wooden extension and storm water overflow are intended as temporary structures which will serve until such time as it becomes necessary to again extend the main brick sewer.

"If it be decided to carry out these recommendations we will be pleased to further outline special requirements that should be prescribed for this work."

The several matters above referred to have but little bearing upon the main work with which we have been charged, the devising of a comprehensive system of sewerage, which has been summarily terminated in a very unsatisfactory and incomplete form by your Resolution of September 11th. As explained in our Progress Report, it is essential that the system should be planned with due regard to the probable growth of the City, so that without reconstruction of main lines the system can be adapted to future requirements.

Although we are not now prepared to fully endorse any project, we feel it our duty to submit at this time a brief outline of some of the measures which we believe will have to be intelligently and honestly carried out before this community

will have received from the proper authorities that relief which it is of right entitled to demand.

The open water way on Channel street (defined as navigable as far west as Harrison street by statutory enactment in 1868 and again in 1892) receives the sewage from an area of over 5,000 acres, inhabited by probably more than 100,000 people. Channel street sewer, the largest in the City, terminates in this open water at Ninth street, about a mile from the present water front of the City. All the sewage contributed by this sewer and by Eighth, Seventh, Sixth, Fifth, Fourth and Third streets sewers, ebbs and flows here, creating a nuisance which must be abated.

It will be necessary to reduce the flow of sewage toward Channel street by an intercepting sewer, and the best location for an intercepting sewer will be along Market street, commencing at some point near Castro street.

This intercepting sewer would receive the entire flow of sewage from the Western Addition, and would reduce the area tributary to Channel street nearly one-half. But there are difficulties in the way of its construction and it is important to select a proper point of outfall.

Market street grades have been improperly established, notably so at Fifth street, where the street is low, and also at points southwestward from Tenth street, at some of which changes have long been under discussion, and if carried out will facilitate and materially cheapen the construction of any main sewer along Market street.

During August and September of this year, we have been collecting data concerning structures already in place along the route of possible main drainage lines, particularly that relating to the position and depth of conduits for gas, water and electricity and of cable road junctions and intersections. On the basis of this information and additional rainfall data to be collected this winter, it was proposed to fully discuss the desirability of the Market street intercepting sewer. We had already found by a preliminary study of the results of current observations made by us this spring, that the foot of Powell street seems to offer particular advantages as an outfall point for a sewer. To reach this point with the Market street sewer it will be necessary to turn northward from Market street into Kearny street, along Kearny street to Telegraph Hill, thence by tunnel on one of several possible routes to the northern slope of the hill, and thence to the outfall point.

It can hardly be questioned that the sewer must be made to serve both for sewage and a limited amount of storm water, but excessive volumes of storm water can be discharged at several points into the main sewers having reasonably direct lines to the bay.

Care must be taken in considering this project to keep in view a probable extension of this sewer further westward to a more remote point of outfall without reconstruction other than connection with the system as now outlined, permitting a further utilization of the Powell street outfall as a relief outlet for flood water.

Whenever it may become necessary to perfect the system of intermittent discharge of sewage into the ebb flow of the tide, it will be necessary to construct a large receiving tank, from which there will be a rapid outflow at the proper time. There is nothing original or novel in such an arrangement, but in the case of San Francisco such an outfall system can probably be so arranged that the receiving tank will be in the form of a tunnel or a series of tunnels terminating at or near Fort Point. The flushing and cleansing of long tanks properly located can be accomplished by trapping sea water at high tides at the upper ends of the tanks.

The main sewer along Market street cannot serve the more southerly portions of the Mission Bay district, for which separate provision must be made.

The sewage from the greater part of the district west from Ninth and Utah streets and south of Market street can all be concentrated, as at present, near Ninth and Channel streets, but it will arrive there at an undesirably low elevation.

From this point it can by proper arrangement of works be delivered to the bay

by gravity flow, but its course should not be through the open water way of Channel street; it should be along Brannan or some other parallel street. It is hardly necessary to say that if it be carried toward the bay on such a route, that it does not seem probable that any plan can be devised for a delivery of this sewage into the bay with sufficient assurance that such delivery will not in time become offensive and create a nuisance that must be abated.

A delivery anywhere near the foot of Channel or Brannan streets is, therefore, not to be considered except as a temporary expedient. The sewage conduits from a large district must, however, by reason of topographical features, be made to concentrate their flow somewhere near the points indicated, and the sewage there delivered must ultimately be forced to a better point of outfall into the bay. When it becomes necessary to carry out this part of any proposed system it will probably be found advantageous to pump this sewage to the same conduits in use for the central parts of the City. This project involves the preservation and utilization of present sewers when properly corrected for grade. Storm waters of the district can be admitted into the sewers and storm water overflows should be provided. During the flood flow in the months of winter there will then be a direct outflow of greatly diluted sewage into the bay on the eastern front of the City, but at all other times no sewage will be there discharged.

Our float observations and studies of direction of drift in the bay make it appear very undesirable to discharge large quantities of sewage at or near Potrero Point, but indicate that an outfall could be maintained at Hunter's Point for an indefinite time without polluting the waters of the bay to an objectionable extent. For this reason it will be necessary to plan for concentration of the sewage from the southern and high portions of Potrero hills and the Islais and Precita Creek districts at some convenient point or points from which sewage can be delivered at an outfall at Hunter's Point either by gravity flow or pumping. Provision must here again be made for a delivery of storm waters during periods of excessive flow from main lines of sewers into the bay through relief outlets, so that it will not be necessary to provide a great capacity for the outfall sewers, and that it may not become necessary to pump large amounts of storm waters.

But in this district, more than any other, a revision of officially established grades should be had before details of the system be prescribed.

The sewage of Bay View and Visitacion districts will have to be treated in the same manner as that of Precita and Islais Creek districts whenever increased population renders the carrying out of a local system necessary. One outfall at Hunter's Point will serve these districts in conjunction with those on its northern slopes.

In that portion of Buena Vista Bay district lying east of Kearny street and north of Market street (including probably the low portions of the City northwest of Rincon Hill and northeast of Second street), it will be well to separate the sewage from storm waters entirely. The number of large sewers in this district must be reduced and suitable provision must be made to keep those intended for rain water free from filth accumulation during the long dry season. For sewage proper a separate system may be introduced to advantage, and delivery can be made to an intercepting sewer somewhere near the water front which will enable temporary disposal at the proposed Powell street outfall or ultimately a discharge into the same works that are required to effect the removal of the sewage from the Market street system to a more remote point of outfall.

The sewage from the North Beach district can readily be carried to a Powell street outlet, which is the natural and best temporary outfall point for the sewers of this district.

For the Washerwoman's Bay district a number of projects are feasible, but that which we would have probably endorsed involves the construction of a main sewer along the lower portion of Pierce street, into which two intercepting sewers along the water front are to discharge, and which will deliver the entire sewage and rain water flow of the district at a point in the bay sufficiently removed from the shore

line to insure thorough dilution of the sewage, making it very improbable that it will become offensive to sight or smell. Here again works should be so planned that their extension to a more remote outfall point will not necessitate reconstruction.

That part of the Presidio district for which provision must be made in connection, with the planning of a general system, embraces but a few blocks of land south of the Presidio Military Reservation, extending from Lyon street to First avenue. This locality is being rapidly built up. It is a very desirable residence locality, and at the present time its sewage is delivered upon the surface of the ground at the south line of the reservation on Locust street, creating a nuisance at that point on the reservation which should at once be abated. As discussed by our Board of Engineers, before the reorganization of February, the best project for relief, and one which has already been sanctioned and approved by the proper authorities of the U. S. War Department, is to carry the outfall sewer diagonally across the southeastern corner of the reservation to a connection with the sewers of the Washerwoman's Bay district. Throughout the greater portion of this route the sewer will be in a tunnel.

Concerning the outfall sewer of the Lobos Creek district (which includes the Richmond district), now about to be constructed, a work which has been devised by preceding administrations and which is recommended for construction by other city officials, we have only to say that our study of the district has not been completed; and that we appreciate the imperative necessity of providing an outlet for this region, even though such outlet be temporarily but an open water way, but we have had no opportunity of critically examining the work now about to be constructed.

The devising of the system of sewers for the Ocean Beach and the Laguna de la Merced districts, should not present special difficulties except as to disposition to be made of the sewage. We are not prepared to offer any suggestion in this connection, except that one project of concentrating it at some point of the coast near the southern limit of the County and there delivering it into the deep water of the ocean, must be considered and its merits determined.

In the further study of these projects it will be necessary to determine the maximum rate of rainfall for short periods of time, as already referred to in our Progress Report. This rate is now known for twelve and twenty-four hour periods, and examples of maximum rates are noted in that Report. In order to properly adjust the capacities and dimensions of main lines of drainage it will be necessary to observe and record the rate for hourly, half-hourly and quarter-hourly intervals, and it will even be desirable to know the rate for five or ten minute intervals, because the rate of fall is the controlling factor in determining the maximum service which the main lines of drainage will be called upon to perform. It is imperative that this data should be collected during the coming season.

As a general basis for the study of areas and topographical features of the several districts to be drained we have prepared a contour map of the City (600 feet to the inch), which is also reliable as a grade map. For a guide as to character, position and serviceability of existing sewers, information has been put, as rapidly as the means at our disposal justified, upon detail sheets (100 feet to the inch). Twenty-seven have been practically completed and some work has been done on seven others. When extended over the built up area of the City there will be about sixty in all. The information concerning the sewers for all of these is contained and is readily accessible in the field books which we have turned over to you.

EXPENDITURES FOR SEPTEMBER, 1893.

Salaries of Engineers in Charge	$550 00	
Salaries of employees	732 18	
Materials and expenses	91 62	
Total		$1,373 80

RECEIPTS AND DISBURSEMENTS FROM JULY 1 TO SEPTEMBER 30, 1893.

Receipts—

Appropriation of July 1, 1893	$40,000 00	
S. F. & S. M. E. R. R. damages (in Treasury)	7 50	
		$40,007 50

Disbursements—

Month of July, 1893	$1,659 45	
Month of August, 1893	1,559 75	
Month of September, 1893	1,373 80	
		$4,593 00
Balance		$35,414 50

Very respectfully,

MARSDEN MANSON,
C. E. GRUNSKY,
Engineers in Charge to Devise and Provide a Sewer System.

The total expenditure of the Commission, as shown by the books of the Auditor, was $23,548.93. (See Auditor's Reports, 1892-3, 1893-4.)

It would seem proper that the Board of Harbor Commissioners, either of their own volition or at the request of the Board of Supervisors, should erect, at some suitable point, a permanent monument to which reference may be hereafter given to show the City base.

TABLE OF GRADES ESTABLISHED

IN THE

CITY AND COUNTY OF SAN FRANCISCO.

The grades of streets herewith presented comprise all the official grades established, and are computed from the base or zero, which is six (6) feet and seven-tenths (7-10) above an ordinary high tide mark on a pile at the boat stairs, corner of Pacific and Davis streets. The top of the wharf at that point is one foot and one-tenth (1 1-10) above the base, or seven (7) feet and eight-tenths (8-10) above ordinary high tide.

APPENDIX.

The following grades were adopted at too late a date to appear in the main body of this book:—

ESTABLISHED GRADES—Continued.

STREETS.	CROSSINGS.	Established by Order No.	GRADE.
Alley..... (No name.)	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), at the northerly corner of Surrey st.....	222x	251.58
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), at the easterly corner of Surrey st.....	222x	250.28
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the northwesterly line of, at a point 65 ft. northeasterly from the northerly corner of Surrey st.....	222x	256.50
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the southeasterly line of, at a point 65 ft. northeasterly from the easterly corner of Surrey st.....	222x	256
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the northwesterly line of, at a point 258.72 ft. northeasterly from the northerly corner of Surrey st.....	222x	258
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the southeasterly line of, at a point 263.79 ft. northeasterly from the easterly corner of Surrey st.....	222x	257.50
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the westerly line of, at a point 83.25 ft. southerly from the southwesterly corner of Sussex st.	222x	270
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the easterly line of, at a point 93.91 ft. southerly from the southeasterly corner of Sussex st..	222x	269.50
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), on the easterly line of, at a point 20 ft. southerly from the southeasterly corner of Sussex st..	222x	282.50
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), at the southwesterly corner of Sussex st....	222x	285.20
	(Between Van Buren and Diamond sts., from Surrey to Sussex sts.), at the southeasterly corner of Sussex st....	222x	282.90
	Between Surrey and Sussex sts., from Diamond st. southeasterly, at the northeasterly corner of Diamond st...	222x	248
	Between Surrey and Sussex sts., from Diamond st. southeasterly, at the southeasterly corner of Diamond st...	222x	246
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on the northeasterly line of, at the intersection with the radial line of the southeasterly end of the curve from Diamond st.....	222x	248.20
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on the southwesterly line of, at the intersection with the radial line of the southeasterly end of the curve from Diamond st.....	222x	247.70

ESTABLISHED GRADES—Continued.

STREETS.	CROSSINGS.	Established by Order No.	GRADE.
Alley..... (No name.) (Continued.)	Between Surrey and Sussex sts., from Diamond st. southeasterly, on a line at right angles to its course, at a point on the northeasterly line of, 144.37 ft. southeasterly from the southeasterly end of the curve from Diamond st.....	222x	259
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on a line at right angles to its course, at a point on the northeasterly line of, 169.96 ft. southeasterly from the southeasterly end of the curve from Diamond st.....	222x	258
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on a line at right angles to its course, 60 ft. southeasterly from the last described line.....	222x	250.50
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on a line at right angles to its course, 300.07 ft. southeasterly from the last described line.....	222x	246.50
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on the northeasterly line of, at a point 53.50 ft. southeasterly along the northeasterly line of, from the last described line.....	222x	244
	Between Surrey and Sussex sts., from Diamond st. southeasterly, on the southwesterly line of, at the westerly corner of the Alley to the southwest.....	222x	239
	Northeast Alley, from Alley to Sussex st., at the southwesterly corner of Sussex st.....	222x	266.04
	Northeast Alley, from Alley to Sussex st., at southeasterly corner of Sussex st.....	222x	265.93
	Northeast Alley, from Alley to Sussex st., on the northwesterly line of, at a point 69.77 feet southwesterly from the southwesterly corner of Sussex st.....	222x	245.50
	Northeast Alley, from Alley to Sussex st., on the southeasterly line of, at a point 63.50 ft. southwesterly from the southeasterly corner of Sussex st.....	222x	246.50
	Southwest Alley, from Alley to Surrey st., at the northerly corner of Surrey st.....	222x	218.80
	Southwest Alley, from Alley to Surrey st., at the easterly corner of Surrey st.....	222x	219
	Southwest Alley, from Alley to Surrey st., on the northwesterly line of (at the corner of the Alleys), distant 80.50 ft. northeasterly from the northerly corner of Surrey st.....	222x	239
	Southwest Alley, from Alley to Surrey st., on the southeasterly line of, 80.50 feet northeasterly from the easterly corner of Surrey st.....	222x	239

ESTABLISHED GRADES—Continued.

STREETS.	CROSSINGS.	Established by Order No.	GRADE.
Alley..... (No name.) (Continued.)	Southwest Alley, from Alley to Surrey st., on the southeasterly line of (at the angle in the Alleys), distant 90.98 ft. northeasterly from the easterly corner of Surrey st.....	222x	240
Castro st.....	At the northwest corner of the crossing of Chenery st.....	222x	191.40
	West line of, at a point 37.07 ft. northerly from Chenery st..	222x	198.60
	West curb line of, at a point 37.07 ft. northerly from Chenery st.....	222x	198.75
	Intersection of the west line of, with the northeasterly line of Surrey st.....	222x	212.10
	West line of, at the intersection with the most easterly tangent (produced) of the southerly line of Sussex st....	222x	265.40
	West line of (50 ft. wide), at the intersection with the northerly line of Sussex st.....	222x	267.10
	West line of (20 ft. wide), at the intersection with the northerly line of Sussex st.....	222x	267.80
	West line of, at the intersection of a line at right angles to its course at the point of intersection of the east line with the northwesterly line of Bemis st.....	222x	269.50
	On a line at right angles to its course and distant northerly 131.52 ft. from the northerly line of Sussex st.....	222x	301.50
	Westerly line of at Thirteenth st.....	280x	218.50
	200 ft. southerly from Thirteenth st.....	280x	218.65
Clinton ave....	Northwesterly line of, at its intersection with the southwesterly line of Surrey st.....	222x	243.10
	Northwesterly line of, at a point 104.80 ft. southwesterly from the last described point.....	222x	224.50
	Southeasterly line of, at the intersection of a line at right angles to its course at the last described point and distant therefrom southeasterly 40 ft.....	222x	224.50
	Southeasterly line of, at a point 104.80 ft. northeasterly from the last described point.....	222x	241
Devisadero st..	Easterly line of, at Thirteenth st.....	280x	259
	Westerly line of, at Thirteenth st.....	280x	261
	Easterly and westerly curb line of Devisadero st., at Thirteenth st. northerly line	280x	260
Diamond st....	On a line at right angles to its course, distant northerly along its easterly line, from the northeast corner of Wilder st., 222.13 ft.....	222x	173.80
	On a line at right angles to its course, at the point of intersection of the westerly line with the southerly line of the Castro Street Addition Tract.....	222x	180.50

ESTABLISHED GRADES—Continued.

STREETS.	CROSSINGS.	Established by Order No.	GRADE.
Diamond st..... (Continued.)	On a line parallel with the last described line, and distant therefrom northerly 100 ft.....	222x	186.50
	On the radial line, at the southerly end of the first curve southerly from Surrey st.....	222x	203.90
	At the southerly line of the crossing of Surrey st.....	222x	214.40
	At the northerly line of the crossing of Surrey st.....	222x	217.60
	On a line at right angles to its course, and distant 80 ft. northerly along its easterly line from the northeast-easterly corner of Surrey and Diamond sts.....	222x	228.80
	Easterly line of, at the intersection with the southerly line of Alley (between Surrey and Sussex sts.).....	222x	246
	Easterly line of, at the intersection with the northerly line of Alley (between Surrey and Sussex sts.).....	222x	248
	At the southeasterly corner of the crossing of Sussex st.....	222x	268
	At the southwesterly corner of the crossing of Sussex st....	222x	267.60
	At the northerly line of the crossing of Sussex st.....	222x	270
